

DBA VHD+ 10x42

Álvaro de las Heras (January 2020)

My first impression while watching through the Opticron DBA VHD 10x42 was really good. What surprised me most was the amount of light you can get in any condition.

As I expected, the image brightness in normal day light is really good. What surprised me were the good sensations I had after using them in low light conditions, not finding big differences with top binoculars of the most expensive brands.

The feeling in hand is really comfortable. Its compact size (145x126mm), the rubber armouring and the open bridge design, make these binoculars really suitable. Another pleasant feature of the DBA VHD is the smoothly adjustable multi-stage eyecups.

Focusing with these binoculars is easy and accurate thanks to the large and well-placed focus wheel. The gearing could seem a bit slow sometimes (due to its 730° of rotation) however it gives you the needed precision for small changes.

Concerning the image, I can say that DBA VHD 10x42 is truly accurate in every situation. Colour reproduction and contrast are very reliable. Through this DBA VHD you can find high contrast images and no colour fringing is perceived.

In summary, I highly recommend this binocular to anyone who wants to upgrade his equipment. Opticron DBA VHD 10x42 gives you the image quality, comfort and endurance of a top brand binocular at a competitive price.
